

BRITA HygienePlus

Hygiene feature: Proven three-zone-protection for special hygiene requirements.

Our special BRITA HygienePlus solution consists of three safeguards. Together, they deliver the outstanding degree of protection needed in hygiene-sensitive environments. In fact, we developed it based on over 20 years' experience in the healthcare market. BRITA HygienePlus removes bacteria and microbial cysts, so you enjoy safe, great-tasting water at all times. Plus, BRITA HygienePlus has been tested in multiple studies at hygiene institutes, including at University Medical Center of the Johannes Gutenberg University Mainz, confirming e.g. compliance with DVGW-W 516.

Benefits of BRITA HygienePlus

1. The first step is the BRITA CLARITY Protect filter. This cartridge combines a pre-filter with activated carbon and hollow-fibre membrane technologies. With a pore size of just 0.15 μm , it reliably retains any potential bacteria and cysts, in line with NSF 53. Plus, it reduces turbidity, metals e.g. lead, and taste-impairing substances e.g. chlorine.
2. Next up is BRITA CLARITY Safe X3. This filter - located directly upstream of the dispenser tap - is a very fine, asymmetrical double-layer membrane that retains any potentially remaining bacteria and cysts just before the water is drawn.
3. Last but not least, BRITA's powerful ThermalGate™ feature automatically and regularly heats the dispenser outlet tap. This protects against contamination from external sources, such as physical contact (e.g. touching the tap) and droplets (e.g. from sneezing or coughing).
